SAI SUKUMAR S

ss3337@srmist.edu.in | 9514355997 | 2027
B.Tech, Computer Science and Engineering - Artificial Intelligence and Machine Learning
Address : No 1404 , tower A , Bollineni Zion, Bollineni Hillside Rd, Nookampalayam, Arasankalani, Sithalapakkam, Chennai, Tamil Nadu 600119

Summary

AI/ML undergraduate with hands-on experience developing and deploying Generative AI, RAG, machine learning, and computer vision applications. Experienced in Python, LLM integration, semantic retrieval, workflow automation, and AI model development through research, internships, and independent projects. Skilled at translating technical problems into practical AI solutions, with an interest in solution architecture, enterprise AI adoption, and production deployment.

Education

SRM IST-Kattankulathur 2027
B.Tech · Computer Science and Engineering - Artificial Intelligence and Machine Learning CGPA - 9.51/10

Montfort Matriculation Higher secondary school 2023
Class XII - State Board · bmpc · Chennai, Tamil Nadu Percentage - 84%

Skills

Programming Languages: Python, C++, JavaScript, SQL

Technical Skills: Machine Learning, Deep Learning, GenAI, Agentic AI, LLMs, NLP, RAG, Automation, EDA, Statistics, Prompt Engineering, Embeddings, Feature Engineering, OOP, REST APIs, LLM evaluation, Business Analysis

Languages and Frameworks: PyTorch, Tensorflow, LangChain, LangGraph, Transformers, Hugging Face, Scikit-learn, Pandas, FastAPI, Flask, OpenCV, NLTK

Tools and Technologies: Git, Docker, ChromaDB, MongoDB, AWS SageMaker, Microsoft Azure, n8n, Power BI, Excel, MLOps, SDLC, Agile/Scrum, MCP, Open-source LLMs, Claude Code

Experience

ION Aerospace India Jun 2025 - Sep 2025
AI Research Intern Chennai

Worked on deep learning-based object detection and SLAM modules for autonomous drone navigation. Integrated computer vision algorithms for feature tracking and supported AI model deployment in embedded edge environments. Gained practical exposure to applying AI and computer vision in resource-constrained autonomous systems.

CodeAlpha Feb 2025 - Mar 2025
Python Programmer Intern Chennai

Developed multiple Python-based projects including a rule-based chatbot using NLTK, a classic Hangman game, and YouTube video download automation. Showcased strong problem-solving skills and hands-on programming through self-driven tasks and GitHub version control.

Unified Mentor Jan 2025 - Feb 2025
Machine Learning Intern Chennai

Completed an Internship at Unified Mentor, gaining hands-on experience in building and evaluating machine learning models. Developed projects on Heart Disease Prediction and Mobile Price Classification using real-world datasets, applying data preprocessing, feature engineering, and supervised learning techniques.

Projects

EstatePulse – RAG-Based Real Estate Research Assistant Jul 2026 - Aug 2026
Self-Initiated Project · Python, LangChain, RAG, ChromaDB, Hugging Face Embeddings, Groq LLM, RAG RAG and GEN-AI

Built and deployed a RAG-based research application that ingests web articles and answers domain-specific questions using semantic retrieval. Integrated document chunking, embedding generation, vector search, and LLM-based response generation with source citations. Developed an interactive interface with configurable source ingestion, retrieval diagnostics, and research-session history.

DATAWHIZ - AI Data Analyst Nov 2025 - Nov 2025
Self - Initiated Project · Python, Pandas, NumPy, Matplotlib / Plotly, Flask, Basic Frontend, GROQ, LLaMA 3.3 Gen AI + Data Analytics

Built and deployed an AI-powered data analysis application that converts natural-language questions into data analysis workflows. Integrated LLM-generated Pandas/visualization code with sandboxed execution to generate insights, charts, and tables from uploaded CSV and Excel datasets. Implemented data preprocessing and downloadable analysis results through an interactive web interface.

GridScan: F1 Driver Detector Jun 2025 - Jun 2025
Self-Initiated Project · Python, OpenCV, GROQ, LLAMA 3, Flask Gen-AI

GridScan is an AI-powered web application that identifies Formula 1 drivers from images using facial recognition and large language models. Upload an image of an F1 driver—past or present—and the app will return their full profile, including their team, car number, championship wins, and current status (active, retired, or deceased).

Publications

A Hybrid Deep Learning Model for Potato Leaf Disease Classification using Transfer Learning and Attention Mechanism | Link Jul 2025
IEEE

Published research under faculty guidance on potato leaf disease classification using a DenseNet-169 backbone integrated with a GSDW block and a Triplet Attention module, leveraged a Kaggle dataset and achieved a 91.8% classification accuracy.

Automated Breast Cancer Classification in Ultrasound Imaging Using Dense and Global Feature Fusion | Link May 2026
IEEE

Published research under faculty guidance on automated breast cancer classification using a DenseNet-169 backbone integrated with a GCN block and an Enhanced AdaptiveConcatPool2d mechanism, leveraged the BUSI dataset and achieved a 92.46% validation accuracy.
